ClinicalKey AI discovery insights

Albert Blesson V

I am a tutor and clinical instructor at the College of Nursing - All India Institute of Medical Sciences Patna, India.

Before using ClinicalKey AI, what was your perception of the use of AI in healthcare?

I viewed AI in healthcare as a useful tool for accessing medical information and supporting clinical decisions, but I had concerns about its accuracy, reliability, and practical application in clinical settings.

What challenges were you facing before ClinicalKey AI was incorporated into your workflow?

Before integrating ClinicalKey AI into my workflow, I faced challenges such as spending considerable time searching for reliable evidence, comparing information from multiple sources, keeping up with the latest clinical guidelines, and quickly finding answers to clinical questions during patient care.

What benefits have you experienced since using ClinicalKey AI?

Since adopting ClinicalKey AI, I have experienced quick access to evidence-based nursing information, improved efficiency in identifying appropriate nursing interventions, optimal clinical judgment and decision-making, reduced time spent searching multiple resources for patient care, enhanced patient education, and better support for delivering safe, high-quality, patient-centered nursing care.

How has ClinicalKey AI impacted your care delivery and overall efficiency?

ClinicalKey AI has helped to improve nursing care by supporting evidence-based interventions, helping to enhance clinical decision-making, helping to improve patient education, reducing time spent searching for information, and allowing more time for quality patient care.

What advice would you give to a colleague considering using ClinicalKey AI?

I would encourage my nursing colleagues to use ClinicalKey AI as a supportive evidence-based resource to help enhance clinical practice. It can help nurses quickly access reliable nursing guidelines, helping to improve clinical decision-making, strengthen patient education, and support delivering high-quality, patient-centred care. However, it should be used alongside professional clinical judgment, institutional protocols, and individualized patient assessment.
