Wibe Group presents

Cable Support Solutions for Data centre

STRONG & VERSATILE

Cable trays and Fibre-Optic Duct

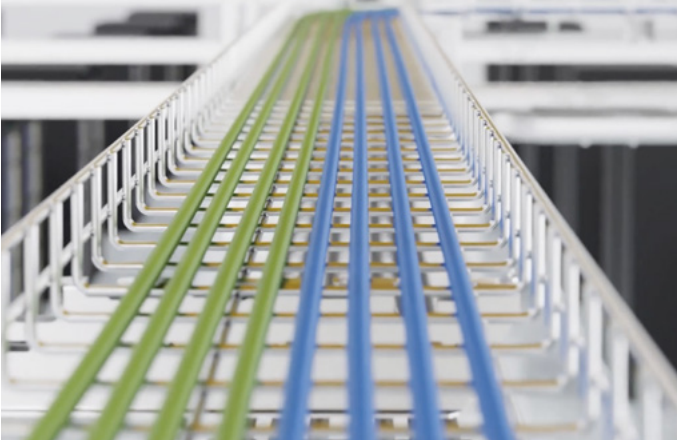

- › Stago has the widest metal cable tray range with the most clickable components for fast, efficient installation. E90 fire test approved products available.
- › The Stago Fibre-Optic Duct (FOD) is a high-load, all-metal system tailored for data centres, featuring an extensive range of specially developed accessories. It enables longer spans, fewer supports, no sagging, and easy expansion.

ROBUST & FUNCTIONAL

Cable ladders

- › The Wibe cable ladders are robust and functional, enabling the same ladder to be used both horizontally and vertically, in the ceiling, on the wall, or even underneath the floor.
- › Wibe's signature slim, hexagonal design provides excellent weight/performance ratio, and enables an easy installation with excellent accessibility and minimal space occupation.
- › E90 fire test approved products available.

FLEXIBLE & LIGHTWEIGHT

Mesh trays

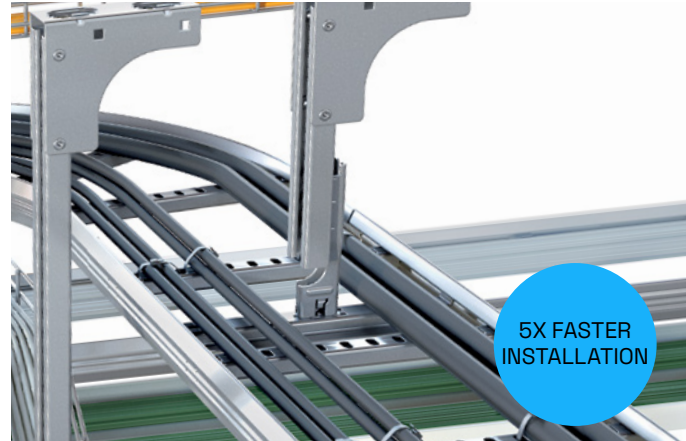

- › For tricky installations in constrained spaces, as well as carrying heavy cabling, Defem Mesh Trays offer an efficient, high-capacity solution designed for flexibility and ease of access. The open structure helps ventilation and cooling to work and prevent overheating.
- › E90 fire test approved products available.

EXCELLENT DURABILITY

Durable GRP/FRP solutions

- › Mita Flex is our latest range of FRP/GRP pultruded cable management solutions, including cable ladders and cable trays, as well as a new innovative and flexible support system. Mita Flex offers robust protection for cables outdoors, for example to power cooling towers on the roof of the data centre.
- › Fire tested. See the Mita Flex catalogue for details.

5X FASTER INSTALLATION

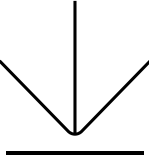

CLX³ support system

- › Innovative fully clickable support system, no bolts or clamps needed.
- › Up to 5 times faster to install in comparison to traditional systems using bolts
- › Use together with Wibe cable ladder KHZSP, Defem mesh trays or Stago cable trays
