MANAGING FLEXIBILITY

Experts for safe transmission of media and energy

Witzenmann combines engineering expertise, proven quality and decades of railway experience. As a trusted development partner, we develop solutions that enhance vehicle performance, simplify installation and help reduce lifecycle costs.

From the idea to series production

Idea

Design / Engineering

Simulation CFD / FEM

Prototyping

Testing / Validation

Series

Designed for reliability

- Compensation of movement, vibration and thermal expansion
- Protection of sensitive systems and components
- Simplified installation concepts
- Long-lasting performance and reliability
- Tailor-made solutions for railway applications

Pipe assemblies

Complete solutions,
reduced complexity

Expansion joints

Protecting systems from
movement and vibration

Metal hoses

Flexible routing,
reliable performance

Air distribution unit

Optimised airflow,
tailored integration
