

VENTILATION

Save space for fresh air.

Efficient fresh air and exhaust air systems that integrate seamlessly into any building structure: With our flat duct system, you have a spacesaving solution that is compatible with all standard ventilation systems.

● Minimal space requirement

Our system enables space-saving installation in walls, floors or ceilings. With a width from 40 mm, it is ideal for floor screed or suspended ceilings.

● Compatible and flexible

The flat duct system can be combined with all standard downstream systems and ensures reliable routing of fresh and exhaust air.

● Direct delivery

Save time and effort: we deliver the entire ventilation ducts to your construction site on the exact day - regardless of whether it's a single-family house, apartment building or prefabricated house.

Everything from a single source. Everything for your success.

As a full-service provider, we support you in all phases of domestic ventilation - from planning to implementation.

Consulting & planning:

We create an individually tailored concept for your efficient and space-saving ventilation.

Development:

Optimized for modular construction methods and use in any building structure.

Individual routing:

Whether air distribution, cross-sectional changes or connection to a further system: as a full-service provider, we deliver the right solution.
