# Octave Tempo Operating Procedures

High-reliability organizations rely on a select amount of subject matter experts (SMEs) per site. While these SMEs would typically be involved in the authoring process, Octave Tempo Operating Procedures (formerly AcceleratorKMS) reduces SME involvement by up to 68% freeing them up to focus on other crucial operational tasks.

"This was literally the first time they have used one of the improved procedures and they already uncovered something totally new to them and prevented a potential incident."
Enterprise Technology Leader & Client

Decrease
in effort for ongoing annual
procedure review

Tempo Operating Procedures helps prevent environmental impacts, rises in insurance premiums, lost time and revenue and equipment failure that can critically impact the business after only one incident.

Tempo Operating Procedures ensures tasks are done right the first time, to protect your organization from information-caused incidents.
