

SOLUTION SHEET

Octave Sequence Enterprise Mobile

Your most up-to-date project information, in the palm of your hand

Projects don't happen in one place.

Projects are planned and executed in the field, in the office, and everywhere in between. But when performance data and decision-making are disconnected, delays follow. Information is entered late, visibility lags, and teams are forced to act on incomplete insight.

Octave Sequence Enterprise's (formerly EcoSys) mobile application extends project performance beyond the desktop, bringing real-time data, workflows, and decisions directly to where work happens.

Bring real-time project insight into the field

Sequence Enterprise Mobile enables teams to capture, access, and act on project data wherever work happens.

Whether it's a contractor identifying an issue on-site, a supervisor reviewing daily progress, or an executive checking portfolio status while traveling, users have immediate access to the information and workflows relevant to their role.

The app allows users to update data directly within mobile views, reducing delays between field activity and system visibility. And when connectivity is limited, offline capabilities ensure work doesn't stop. Users can continue to capture updates, submit progress, and make changes without an internet connection, automatically syncing once connectivity is restored.

The result is a more accurate, up-to-date picture of project performance, regardless of location or connectivity.

Out-of-the-box mobile apps for critical workflows

Sequence Enterprise Mobile provides pre-configured apps designed to support high-impact project processes. These apps are ready to deploy and can be tailored to align with organizational data structures and business rules.

Core use cases include:

- **Change Management:** Capture and initiate change requests from anywhere, with built-in workflows to support review, approval, and impact assessment
- **Project Risks:** Identify, document, and update risks in real time, including the ability to attach photos and field observations
- **HSE & Quality:** Report incidents and observations related to safety, environment, and quality, with workflows to track resolution and ensure compliance
- **Field Reporting & Daily Logs:** Submit labor, equipment, and progress updates directly from the field, with connections to changes, risks, and issues

These applications ensure that critical project inputs are captured as work happens, not after the fact.

Mobile apps can be built to support many processes including:

- Executive reporting and analytics
- Daily reporting of field progress activities and status
- Project forecast updates
- Email notifications
- PR and PO approvals
- Funding request approvals
- Compliance Standards (i.e. HSE)
- Timesheets
- And more.

Faster time capture and improved forecasting accuracy

Sequence Enterprise Mobile streamlines timesheet and data entry, making it easier for users to submit time and progress updates directly from the field.

By capturing actuals earlier, organizations improve the accuracy of downstream processes such as cost tracking, forecasting, and performance analysis.

This reduces reliance on delayed or manual data entry and strengthens the reliability of project insight.

Build and adapt mobile apps, without IT dependency

Every organization operates differently. Sequence Enterprise Mobile is designed to adapt.

In addition to pre-configured apps, organizations can create and configure their own mobile applications directly within the Sequence Enterprise platform, without coding or complex integrations.

Using a no-code configuration approach, administrators can define:

- Data fields and forms
- Business rules and workflows
- Layout and user experience

Once deployed, updates are automatically reflected on mobile devices, allowing organizations to evolve processes quickly without disruption.

Simple access, enterprise-grade security

Sequence Enterprise Mobile is designed for fast adoption without compromising security.

Users can quickly access relevant applications and data through streamlined setup, including QR-based onboarding and Single Sign-On (SSO). Role-based permissions ensure that users only see what they are authorized to access, aligned with enterprise governance requirements.

The platform supports robust encryption and authentication standards, ensuring that data remains secure across devices and environments.

Business impact

Extending Sequence Enterprise into the field delivers measurable improvements across project execution:

- **Real-time visibility** into project performance as work happens
- **Stronger collaboration** across distributed teams and stakeholders
- **Faster decision-making** with immediate access to current data
- **Reduced delays** between field activity and system updates
- **Improved data accuracy** through timely capture of field inputs

What is Sequence Enterprise?

Sequence Enterprise is Octave's enterprise project performance platform, unifying project portfolio management, project controls, and project management in a single, connected system.

With mobile capabilities fully integrated, it ensures that project data, workflows, and decisions are accessible wherever work happens, enabling organizations to operate with greater speed, accuracy, and control.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property, and assets— for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency, and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
