SOLUTION SHEET

Ten reasons to transform your human processes with Octave Tempo Operations Management

Octave Tempo Operations Management is a world-class operations management platform used by multinational companies across the world. **See ten powerful ways Tempo Operations Management elevates human processes.**

1. Improved health and safety processes

Formalized, efficient, repeatable and auditable heath, safety and environment (HSE) processes in Tempo Operations Management (formerly j5 Operations Management Solutions) help reduce risk during shift handover and other hazardous processes. Tempo Operations Management captures essential shift-end information guide operators through safety checklists before every handover.

2. Fewer human errors

Improved communication means fewer human errors. This leads to improved production, less maintenance and reduced losses. Tempo Operations Management applications, such as Tempo Operator Rounds and Routine Duties (formerly j5 Operator Rounds and Routine Duties), can guide personnel through their daily tasks, ensuring that nothing critical is missed in the day-to-day operation of an industrial plant. This is a flexible yet consistent process when using Tempo Operations Management templates, which are developed in a patented spreadsheet-like environment.

3. Enterprise-wide visibility

Tempo Operations Management brings clarity and coordination to every shift and every site. Authorized users can instantly access current and historical log entries through the Tempo Operations Logbook (formerly j5 Operations Logbook), using familiar tools to search, filter and drill down into critical details. With an enterprise approach to visibility, Tempo Operations Management keeps managers and teams connected through real-time dashboards, reports and notifications.

4. Increased efficiency

Tempo Operations Management standardizes processes across the plant and data entry can be automated where possible. Tempo Operations Logbook data is easy to retrieve from any web browser without any additional software. Logs can be color-coded for easy identification, and searching for data is simple. Tempo Operations Management ensures every detail is accurate by verifying critical fields, checking spelling, eliminating duplicate entries and performing automatic calculations to keep data clean and reliable.

5. Connection with other plant software

Tempo Operations Management can read and write data automatically from software such as the distributed control systems (DCS), supervisory control and data acquisition systems (SCADA), computerized maintenance management systems (CMMS), data historians and laboratory information management systems (LIMS). This provides operators with a single user interface for maintenance information, real-time data and other useful information sources. Tempo Operations Management connectors are available with the AVEVA™ PI System™, Aspen InfoPlus.21® (IP.21), SAP® Plant Maintenance (PM), IBM Maximo® and other industrial software.

6. Elevated employee accountability

Tempo Operations Management creates a clear record of every action, capturing the date, time and user for each log entry or revision. Digital signatures at shift handover and other role-based procedures ensure full accountability. User access can be precisely configured to control visibility, editing rights and application access across sites. The platform also enables measurement and monitoring of human process KPIs, driving accountability and performance.

For more information on Tempo Operations Management, please visit **octave.com.**

7. Excellent flexibility

Tempo Operations Management adapts as your organization evolves. New applications can be developed and existing ones refined to meet changing operational needs. Custom fields, categories, attachments, data sources and role-based workflows can be added with ease. With Tempo Operations Management templates, paper forms and spreadsheets are transformed into enterprise-grade applications taking flexibility, speed and scalability to the next level.

8. Detailed reporting

Tempo Operations Management delivers standard dashboards, reports and views with the ability to customize reports for every stakeholder. Users can easily schedule report delivery, build distribution lists and consolidate multiple logbooks or sites into a single, unified view. The result is a rich, high-quality view of operations that can be exported directly to analysis tools such as spreadsheets for deeper insight.

9. Continuous application development

Developing and maintaining in-house operations management software is increasingly difficult in today's fast-paced digital landscape. Tempo Operations Management eliminates that burden, continuously evolving with industry specialists who have been refining and advancing the platform for years to stay ahead of innovation.

10. Internationally tried and tested

Tempo Operations Management is a suite of world-class software for shift handover, operations, process safety compliance and mobility that is trusted by multinational companies such as AGL Energy, Calpine, Infineum, INPEX, JXTG Nippon Oil & Energy, Saudi Aramco, Thames Water and more. The platform is used by over **85%** of the downstream and **100%** of the upstream oil and gas assets in Japan. As a result, the solution has been developed in industries with a strong continuous improvement (Kaizen) philosophy.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property, and assets– for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency, and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
