Octave Sequence Data Integration

Easier, faster project data integration

[Octave Sequence Data Integration](#) (formerly EcoSys Connect) is a cloud-enabled integration platform that provides no-code and low-code integration solutions between EcoSys and your other important software systems. Using our drag-and-drop job builder and innovative scheduling interface, it has never been easier to bring all your project data together to drive greater efficiency, productivity and insightful decision making.

Integration unlocks performance

Successful project performance hinges on receiving timely and accurate insights. Too often, these critical insights are delivered too late to affect positive change, hindered by silos of disconnected systems and a reliance on inefficient manual processes.

[Octave Sequence Enterprise](#) (formerly EcoSys) mitigates these challenges by providing key processes across the full lifecycle of projects and portfolios. Then, where Sequence Enterprise doesn't have native capability, easily fill the gap with simplified integration of external systems. Enter Sequence Data Integration.

Data integration is usually complicated. Up to 40% of the time and effort of an enterprise software implementation can be dedicated to this endeavor. Instead, Sequence Data Integration makes integrations more responsive, faster to achieve and less costly.

Those with fully integrated processes are **2.8x more successful** than those in silos.

Key benefits of Sequence Data Integration

Supports all Sequence Enterprise integrations.

A flexible, cloud-enabled, bi-directional middleware platform to connect Sequence Enterprise with all your project data sources of record – financial/ERP, scheduling, timesheets, engineering, procurement and almost any other.

Increased reliability and simplified maintenance.

With so much of the work already built in and no reliance on programmers, integrations are stable, easy to monitor and simple to update when needed.

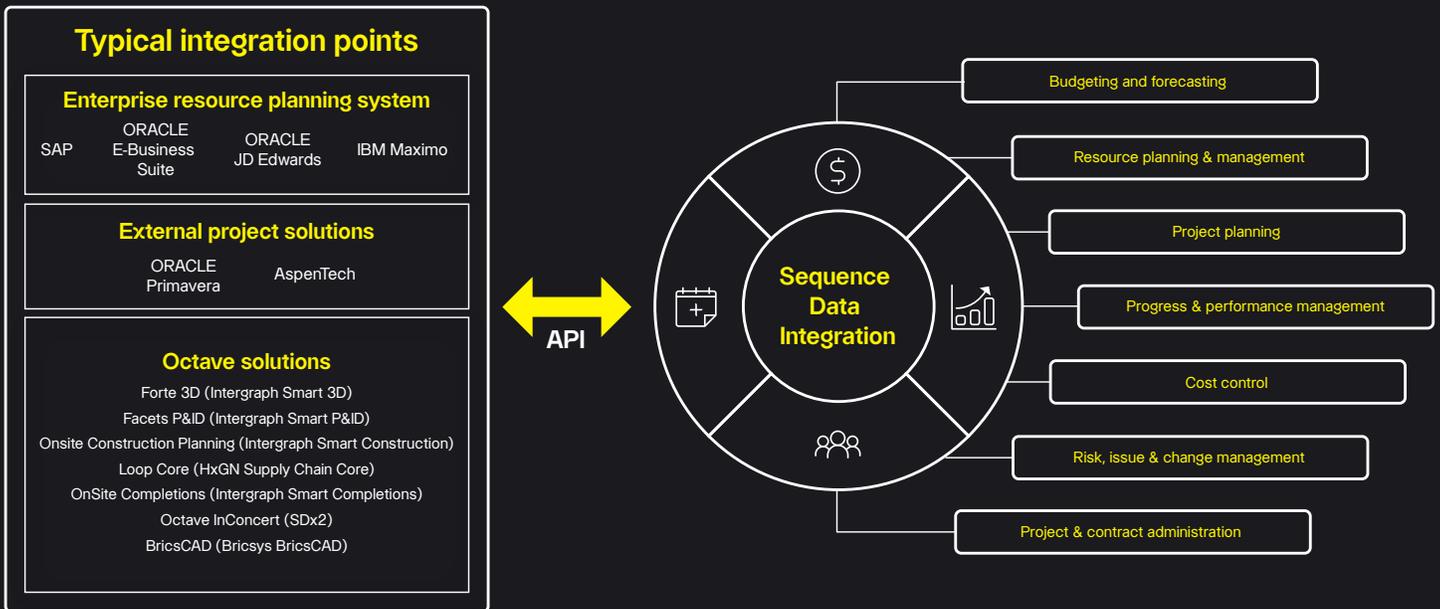

Reduced implementation time and cost.

A configurable, no-code and low-code solution, Connect eliminates the need for complex programming, shortening integration engagements.

Improved performance. Wait less. Know more. Built using the most current integration technologies and processes, Connect will inform your dashboards and reports faster than ever.

Main features

An ultra-modern platform designed with an intuitive user interface, Sequence Data Integration provides features and utility that make it easy to set up and maintain:

- **Cloud-enabled platform.** Purpose-built to work in concert with today's infrastructure needs.
- **Intuitive user dashboard.** Monitor job status and leverage unprecedented access to audit logs.
- **Automated data transfer.** Patent-pending interface for scheduled and on-demand integration jobs.
- **Error handling.** Quickly identify failed jobs to make sure you are always using the latest, most accurate data.
- **Configurable field mapping and transformations.** It has never been easier to get your data to the right place, in the right format, for the right insights.
- **Powerful web services API.** Using the Sequence Enterprise battle-hardened API, Sequence Data Integration is your ally in communicating with all your integration end points while supporting your requisite protocols: SOAP, REST, OData, SQL/ODBC.
- **On-premise to cloud integrations.** While exceptional in the cloud, we certainly didn't forget our friends on the ground. Sequence Data Integration's satellite agent gives full web services API capabilities to on-prem systems typically limited to "integration" through flat files or staging tables.
- **Container-based Installation.** Eliminate complexity to quickly get running and configuring the connections you need.

Pre-configured integration solutions

The same way Sequence Enterprise and [Sequence Enterprise Mobile](#) extend the configurable platform with robust, out-of-the-box solutions, Sequence Data Integration offers pre-configured integrations to accelerate your time to value and lower implementation costs.

Our growing library of connectors includes the P6 Connector. The entirely no-code solution integrates with multiple Oracle Primavera P6 instances at once. Share key data from WBS structures to activities, resources to progress and milestones, and much more.
