SOLUTION SHEET

Smarter, simpler control of work

Ready to take control of work digitally?

Faster. Simpler. Smarter. Octave Tempo Operations Management (formerly j5 Operations Management Solutions) transforms control of work processes with templated forms, optimized workflows, standards-friendly practices and more—all in one, seamless digital solution.

To cap it off, Tempo Operations Management offers a no-code/low-code approach, so companies can easily custom configure templates to fully align with customer work practices and requirements.

Paper-based and basic form permitting systems keep organizations stuck in the past. A truly digital model powers them forward.

By digitalizing these business-critical processes, Octave Tempo Control of Work (formerly j5 Control of Work) helps companies amplify efficiency, ensure compliance, reduce risk and scale up operations.

With Tempo Control of Work, organizations can learn, adapt and optimize digital permits in real-time—resulting in fewer errors and less working time lost to admin and approval. To improve efficiency even further, Tempo Control of Work connects directly to Computerized Maintenance Management Software (CMMS) or EAM software to automate data entry.

Digital workflows ensure the right permit is issued to the right person at the right time, with enforced approval processes that guarantee compliance. 3D model site walk-throughs and laser scans enhance the planning process. Seamless connectivity supports stakeholder collaboration and strengthens safety during planning, executing maintenance and inspection. It's all possible with Tempo Control of Work

Real-world benefits

- Productivity gains: **15 minutes** per permit, per person for mobilization to the worksite and 30 minutes per permit in digitalization efficiency
- Savings of **>2%** production losses from turnaround management efficiencies
- **> 2.5%** increase in wrench time
- **5% to 15%** reduction in unplanned maintenance costs
- **50%** reduction in audit and continuous improvement costs

These are amplified by the quick "time-to-value" approach of Tempo Operations Management's Configurable Control of Work.

Octave's unique Tempo Control of Work solution is powered by patented Tempo Operations Management IndustraForm templates.

No-code needed = no time lost. Tempo Operations Management's "quick time-to-value" approach offers turnkey control of work templates that are implementation-ready. Additional self-service, no-code/low-code tools let teams configure templates to their exact needs while seamlessly reducing time and cost.

Unlike other solutions that require specialized skills and training to configure, resulting in a higher cost of ownership, Tempo Control of Work offers a unique and straightforward digitalization approach with its patented spreadsheet-like configuration environment.

This intuitive no-code/low-code approach enables end users to quickly manage changes that affect the desktop browser and mobile user experience without reliance on expensive vendor services—making Tempo Control of Work a quick time-to-value investment with high flexibility and a lower total cost of ownership.

Configurability powers best practices while facilitating continuous improvement

Reduce operational risk with greater visibility of planned and ongoing work

Increase efficiency by reusing previous permits and isolations without unnecessary delays

Enforce workflows and provide a full audit trail of activities to quickly satisfy internal and external compliance requirements

Easier to use. Exponentially more powerful. As a fully featured platform, the Tempo Control of Work solution delivers:

- Full integrated business processes – permits, isolations, certificates and risk assessment
- Out-of-the-box templates (based on current standards and industry practices)
- No-code/low-code workflow management and self-service tailoring
- Mobility as standard with no code configuration
- Tag printing with QR code access to the isolation point
- Qualification management
- Integration with Octave Tempo Control System Effectiveness (formerly PAS PlantState Integrity) for enhanced PSM capability and IPL assurance
- Simultaneous Operations (SIMOPs) management

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property and assets – for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
