SOLUTION SHEET

Driving shift excellence

Effective, well-managed shift handovers help ensure critical information is clearly communicated and operations run smoothly

Empower your operators to confidently capture and communicate every key shift activity during handover.

In a highly controlled food and beverage environment, strong processes enable teams to perform at their best. Keep everyone informed and aligned by promoting shift excellence.

Informed workers are a crucial layer of protection that keeps the facility running efficiently. When you invest in how workers operate the facility daily, you tap into their expertise by increasing awareness and efficiency through shift excellence.

Driving shift excellence is to fully apply your teams by blending digital transformation with human judgment and awareness. It's about ensuring operators have all the information they need when they need it, without relying exclusively on disconnected data sources or human memory during shift operations.

Drive shift excellence by digitizing operations to reduce risk and improve compliance. Transform and connect operational processes such as shift handover, manual and automatic logbook entries, daily work instructions and operational orders.

With these transformations from paper and spreadsheets, you will improve continuity throughout shift changes, breaking down traditional departmental silos to operate the facility as one team with high visibility, leading to higher accountability.

Automated and manual logging of events drives action and updates in real-time. Operators digitally record and track events from the plant with mobile devices. Supervisors and managers have a near real-time view of the facility status and can escalate unusual conditions to react faster.

Data integrity is a crucial part of the daily operation; data collection from batches and audit trails are ensured on operational checklists and logbooks. At shift handover, the relevant information is automatically collected, organized and presented in a shift handover report.

The data is easy to access during an audit, and the information is actual and reliable. A process that previously took hours or was barely impossible is now simplified with an integrated overview of the ongoing operational activities into the next shift.

Incoming workers will be confident that they are aware of all potential hazards and conditions in the plant, and outgoing workers will be comfortable knowing they have completed and communicated shift activities.

See a reduction in your operating expenditures (OPEX costs) as incident rates drop while operator productivity and production reliability increase. Additionally, employee satisfaction will increase as workers fell safer and more productive.

Reduce the risk as procedures are executed, information is collected and decisions are made throughout the shift through shift excellence.

Empower workers

Save time

Improve communication

Address critical issues

Make sure you and your workers are fully informed by driving shift excellence.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property and assets – for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
