Octave Attune EAM for sports and entertainment

Full venue. Full visibility.

A modern sports or entertainment venue is far more than a place where fans gather. It is a year-round operational and complex ecosystem where infrastructure, technology, guest services and event execution must perform without interruption.

Behind every event are thousands of assets that keep operations moving such as HVAC systems, digital signage, broadcast infrastructure, security equipment, ticketing hardware, refrigeration, fleet vehicles and mobile event equipment. Many are shared across departments. Some move constantly. Others remain critical but largely invisible until something fails.

When those assets are managed in disconnected systems, spreadsheets or through manual processes, visibility suffers. Accountability becomes inconsistent. Maintenance becomes reactive. Finance is left reconciling incomplete records across departments.

Octave Attune EAM [formerly HxGN EAM] helps sports and entertainment organizations bring structure, visibility and control to asset operations across the entire venue environment.

Built for the complexity of venue operations

Game day may last a few hours. Operations never stop.

Facilities teams manage building infrastructure and mechanical systems. Security oversees radios, access devices and surveillance equipment. Guest services depend on mobile operational assets. IT supports critical endpoint hardware. Event operations coordinate temporary equipment under tight timelines and constant turnover.

Each function plays a vital role. But when asset ownership and processes evolve independently, organizations lose the unified visibility needed to operate efficiently at scale.

That can create familiar challenges:

- Assets that are difficult to locate
- Inconsistent maintenance execution, duplicate purchases
- Limited lifecycle visibility and gaps between operations and finance

Attune EAM helps replace fragmented asset management with a connected, enterprise-wide approach.

One connected view of your asset ecosystem

From fixed infrastructure to mobile operational equipment, Attune EAM creates a single system of record for the assets that support your venue.

That means engineering teams can manage maintenance history and asset condition, operations teams can track equipment movement and availability, and finance teams can gain stronger visibility into lifecycle value and governance.

Whether managing escalators, concession equipment, scoreboards, parking infrastructure, housekeeping equipment or security assets, teams work from consistent, up-to-date information instead of disconnected records.

The result is better coordination, stronger accountability and more informed decision-making across the organization.

Designed for operational readiness

Venue operations move fast. Teams need systems that support execution, not slow it down.

Attune EAM helps maintenance teams shift from reactive work toward a more proactive operating model through preventive maintenance scheduling, automated work triggers and real-time asset visibility. Field teams can access information wherever work happens, whether inside a mechanical room, across a parking facility or during overnight event turnover.

For mobile and high-value operational assets, structured check-out and custody tracking help organizations maintain accountability as equipment moves between departments, events and locations.

Instead of relying on existing knowledge or disconnected spreadsheets, teams gain a more disciplined, repeatable way to manage operations.

Stronger governance. Better financial alignment.

Asset management is not only an operational concern. It is a business discipline.

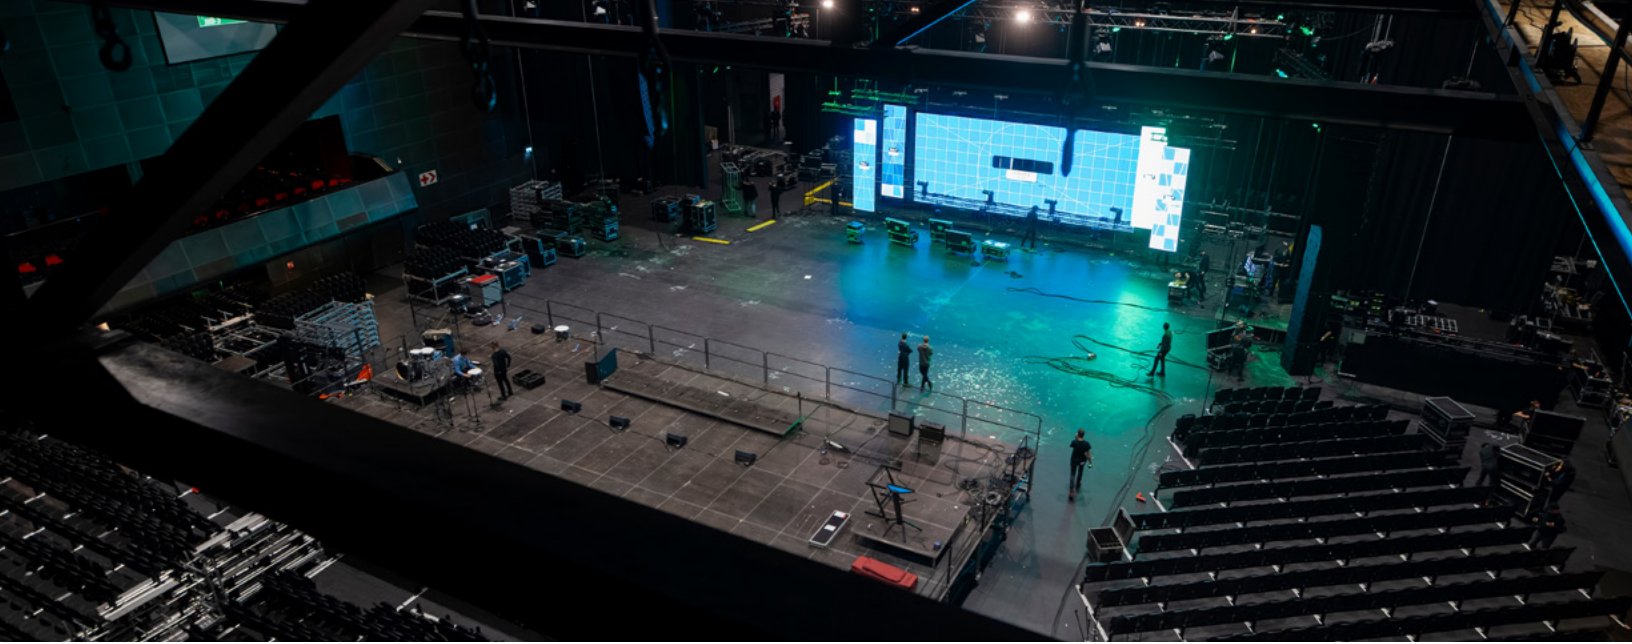

Without clear governance, organizations often struggle with inconsistent procurement controls, incomplete asset records and limited financial visibility. That creates unnecessary risk for leadership, operations and finance alike.

Attune EAM helps establish stronger governance through configurable workflows, approval processes and role-based access that reflect how your organization operates.

Integration with ERP and financial systems helps bridge the gap between operations and finance, creating better alignment around procurement, depreciation, reconciliation and capital planning.

The result is a more controlled, auditable and financially accountable asset program.

Built around how your venue operates

Technology alone does not solve fragmented processes.

Successful modernization starts with understanding how work happens across your organization.

Octave works with stakeholders to define operational workflows, governance expectations, ownership models and integration priorities before implementation begins. That helps ensure the solution reflects your real operating environment, not a generic deployment model.

For organizations managing renovations, expansions or capital projects, Attune EAM can also support smoother construction-to-operations handovers by preserving asset data continuity as new infrastructure enters service.

This creates a stronger operational foundation from day one.

Outcomes that matter

When sports and entertainment organizations modernize asset management with Attune EAM, they create measurable operational advantages:

- Stronger visibility across departments and asset classes
- Improved maintenance consistency and operational readiness
- Reduced asset loss and unmanaged inventory
- Better financial accountability and audit readiness
- More informed lifecycle and capital planning decisions
- A scalable digital foundation for future growth

Proven enterprise asset management. Modern SaaS delivery.

Attune EAM brings more than 30 years of enterprise asset management experience to some of the world's most complex operating environments.

Delivered as a modern SaaS solution, it helps organizations reduce IT burden while maintaining a secure, scalable and continuously current platform.

That allows your teams to stay focused on performance, reliability and guest experience, not infrastructure management.

Bring control to every asset across your venue

Great venue experiences depend on operational excellence behind the scenes.

Attune EAM helps sports and entertainment organizations create the visibility, accountability and operational discipline needed to perform with confidence.

Learn how Octave can help modernize asset management across your venue ecosystem.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property, and assets— for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency, and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
