Octave Attune EAM for oil and gas

Manage your assets better

Rising global demand of oil and gas products, especially in developing countries, drives a growing need to discover new sources, create new techniques and implement technological advances to unlock hydrocarbons from deposits that once felt out of reach. With that progress comes pressure including more risk, more volatility and more to manage.

Use advanced EAM practices

Octave Attune EAM (formerly HxGN EAM) helps you stay ahead. Backed by decades of industry experience, it brings structure to that complexity, so you can run safer, more efficient and more adaptable operations.

Gain deeper visibility into asset performance. Strengthen environmental health and safety (EH&S). Integrate predictive maintenance, performance monitoring and alerting and energy insights into one connected view. The result? Teams gain greater control over operating and maintenance costs and a clearer path to optimized performance.

Achieve a higher return on your infrastructure with Attune EAM.

Improve asset reliability

Get the best possible return from your capital assets, including the compressors, valves, pumps and motors that keep pipelines, oil platforms and wells operating at peak performance. Attune EAM's extensive, industry-specific capabilities, critical asset reliability efficiencies and best-in-class functionality offers the flexibility to adapt as conditions change.

With Attune EAM for oil and gas, you can:

Increase asset reliability. Monitor the condition of assets, detect potential problems and prevent disruptions with maintenance alerts. It supports the full asset lifecycle, allowing you to realize the full potential of mission-critical equipment, increasing asset utilization, improving capital allocation and enabling productivity, efficiency, quality and sustainability initiatives.

Ensure operational compliance and safety. Track, analyze and report asset conditions. Automate responses and generate the documentation you need without slowing operations.

Track and report emissions. Analyze both emissions and energy consumption in real time. Alert your operations team of energy waste or regulatory non-compliance. Make smarter decisions with deeper insight into performance and usage.

Manage energy efficiency and environmental compliance. Manage assets by condition to uncover cost-savings opportunities and adjust maintenance and energy control strategies to reduce usage and costs. Determine asset energy usage, reliability and efficiency with Attune EAM's asset sustainability capabilities. Conduct in-depth benchmarking and make more informed decisions by tracking energy usage and emissions at the corporate level, down to the plant, group of assets and individual assets.

Empower field teams. Put work management, inspection management and interrogation capabilities into the hands of field teams. Enable faster decisions, better execution and stronger data integrity right at the point of work.

Automate processes and streamline decision-making. Remove the guesswork of manual processes with Attune EAM Constraint Optimizer using two key capabilities. Activity dispatch optimization helps automate the assignment of work orders and activities based on business requirements, desired outcomes and constraints. Asset investment planning supports future action planning and decision-making based on planned funding, calculated risks, validated conditions and asset lifecycle sustainment tactics.

Manage assets from one system. Manage facilities, fleets and linear assets from a single system connected across operations.

Work smarter

Time spent searching for data is time lost. Attune EAM brings everything into focus, so your teams can act faster, from anywhere.

Organized

Role-based dashboards and powerful personalization tools let you arrange graphs, key metrics, priority alerts and favorite inquiries on a single screen for faster decisions.

Mobile

Access and update data in the field, online and offline. Maintenance and asset managers can view up-to-date information where they need it the most — at the point of performance.

Assign, perform and record activities and ad-hoc work orders more efficiently. Field service teams can record as they work rather than waiting to document work after the fact for better service, improved accuracy and more efficient asset management.

Confident

Get alerts early. Act fast before issues escalate.

Connected

Integrate most systems for a unified view of operations.

Reliable

A single, reliable source for reporting and insights.

Social

Social collaboration brings together the team to work on the same project or document in real time. Greater collaboration can allow teams to improve processes, act faster, be more productive and get better results.

Increase ROI

Sharper visibility means smarter decisions and stronger outcomes.

With Attune EAM for oil and gas, you can:

- Improve asset reliability with a more proactive strategy
- Enhance equipment up-time and energy efficiency to reduce operational expenses
- Boost labor productivity by as much as 20%
- Strengthen safety and regulatory compliance
- Reduce emissions
- Optimize work dispatching based on business drivers
- Invest in the right assets at the right time

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property and assets – for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency, and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
