

SOLUTION SHEET

Digitize your control-of-work and ePermit-to-work processes

Octave Tempo Operations Management (formerly j5 Operations Management Solutions) provides a practical approach to control of work with templated forms and workflows aligned to widely adopted practices for permit to work, isolation management (lockout/tagout) and risk assessment processes, all in a single solution.

Tempo Operations Management uses a no-code/low-code approach that allows organizations to configure templates and workflows to align with their specific work practices and operational requirements.

Configurable control of work

Paper-based and basic digital permit systems are still common across many industries. More organizations are moving to fully digital control-of-work processes to improve efficiency, strengthen compliance and reduce operational risk.

By digitalizing processes with Octave Tempo Control of Work (formerly j5 Control of Work), companies can reduce operational risk and increase efficiency.

Given most of this work is repetitive, digital permits can be reused and improved over time using lessons learned from previous activities. This helps ensure the latest approved version of a permit is used, reducing errors and minimizing time spent on permit administration and approvals.

Tempo Control of Work integrates with computerized maintenance management systems (CMMS) or enterprise asset management (EAM) software, helping automate data entry and improve the efficiency of permitting. Digital workflows help ensure that the correct permit is issued to the right person at the right time while enforcing approval processes and supporting compliance.

Site walk-throughs using 3D models and laser scans can further enhance the planning process. Tempo Control of Work supports collaboration and communication across operations, maintenance and safety teams to help plan and execute work safely and efficiently.

Real-world benefits

Productivity gains: Up to **15 minutes** saved per person during worksite mobilization and up to **30 minutes** saved per permit through digital workflows

Savings of **>2%** production losses from turnaround management efficiencies

>2.5% increase in wrench time

5% to 15% reduction in unplanned maintenance costs

50% reduction in unplanned maintenance costs

Octave Tempo Control of Work is powered by Tempo Operations Management IndustraForm templates.

Tempo Operations Management enhances value delivery with a “quick time-to-value” approach, using templates that can be deployed as a turnkey control-of-work solution.

Tempo Operations Management provides a self-service capability so templates can be tailored to what is currently in use, reducing implementation and engagement time and cost. This flexibility is enabled through the Tempo Operations Management IndustraForm designer, a no-code/low-code configuration toolset.

Unlike solutions that require specialized skills and training to configure, Tempo Control of Work uses a familiar spreadsheet-like environment. This approach enables end users to quickly manage changes across the desktop browser and mobile experience without relying on costly vendor services. The result? Organizations experience a flexible, rapid time-to-value investment with a lower total cost of ownership.

Easy to configure. Fully featured. Built for complex control-of-work requirements.

- Integrated business process for permits, isolations, certificates and risk assessments
- Out-of-the-box templates based on current standards and industry practices
- No-code/low-code workflow management and self-service tailoring
- Mobility access with no code configuration
- Tag printing with QR code access to the isolation point
- Qualification management
- Integration with Tempo Control System Effectiveness (formerly PAS PlantState Integrity) for enhanced PSM capability and IPL assurance
- Simultaneous operations (SIMOPs) management

Configurability enhances best practices while facilitating continuous improvement

Reduce operational risk with greater visibility into planned and ongoing work

Increase efficiency by reusing permits and isolations without unnecessary delays

Enforce workflows and provide a full audit trail of activities to quickly satisfy internal and external compliance requirements

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property, and assets– for any scope, at any scale. For decades, we’ve partnered with customers to sharpen performance, elevate efficiency, and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what’s possible from day one onward.
