

PRODUCT RELEASE

Octave streamlines investigations with Coda Video 9.2

Octave has just released a major update to its enterprise-class video management software (VMS) Octave Coda Video (formerly HxGN dC3 Video). The release introduces deep integration with multisensor cameras for enhanced situational awareness and new capabilities for more effective investigations and improved security workflows.

Octave Coda Video 9.2 marks the first step toward a new process approach, **Smart Evidence Management (SEM)**, which delivers faster, more consistent investigative outcomes for organizations handling high case volumes. By streamlining how evidence is gathered, compiled and shared, SEM reduces workflow friction – where even small efficiency gains drive meaningful impact. Enhanced video export capabilities and intuitive in-view navigation enable teams to quickly assemble and distribute clear, defensible evidence, accelerating case resolution and strengthening decision confidence.

Display performance in the native client has been significantly enhanced, delivering a consistently smooth and responsive experience across all use cases. Operators can now view more video streams simultaneously at higher resolutions while maintaining

reliable performance. By eliminating a key source of friction in daily operations, these improvements support more streamlined workflows, reduced operational strain and quicker, more confident decision-making.

Coda Video 9.2 also enables **seamless integration of multisensor cameras** that can capture large areas at a high level of detail, making it the perfect choice for airports, rail and mass transit networks. In addition, installations using Dallmeier Panomera cameras now feature an advanced capability set that includes automated stitching and lossless zoom, enabling maximum situational awareness.

Additional updates – ranging from simplified deployment with a **new unified Coda Video module installer to enhancements in the Octave Coda Web Client** – reduce operational friction and help organizations roll out and manage their systems with greater efficiency.

These enhancements reflect Octave's ongoing commitment to innovation in physical security, helping customers make smarter, more data-driven decisions across their organizations.

Coda Video 9.2 is available now in Octave's physical security partner portal.
