The hidden cost of engineering information gaps

Engineering information powers operations.
Information gaps drive costs.

Engineering

Time lost finding information

- Searching for documents
- Verifying data
- Reconciling discrepancies

Maintenance

Time lost preparing work

- Creating workarounds
- Rework and delays
- Inaccurate maintenance plans

Operations

Time lost making decisions

- Delayed decisions
- Reduced efficiency
- Increased downtime
- Higher operating costs

Compliance

Time lost managing risk

- Audit challenges
- More admin effort
- Higher risk
- Potential penalties

Owner-operators spend **2-4%** of project costs recreating missing or incorrect engineering information after handover.

THE IMPACT ADDS UP

- **More time searching**
- **More rework and delays**
- **Lower productivity**
- **Higher operational risk**
- **Higher costs over the life of the asset**

Information isn't just data.

It's the foundation for safe, efficient and reliable operations.

MAKE INFORMATION QUALITY A PRIORITY.
