Octave Forte StructureWorx

Efficiently create fully intelligent, 3D structural designs

Octave Forte StructureWorx (formerly CADWorx Structure Professional) includes the critical tools you need for effective structural design to help reduce the workhours needed to create your structural projects. Workflows have been built into the design of the software that aid in producing revenue-earning deliverables more quickly and accurately.

Time-saving 3D modeling

Create fully intelligent, 3D structural models with the unparalleled flexibility and collaboration of a DWG-based system. Choose shapes or assemblies from a diverse library and use grid systems to accurately build your structures and communicate project layouts.

Comprehensive steel shape catalogs

International catalogs of steel shape libraries in both imperial and metric units are included with Forte StructureWorx, providing the necessary steel shapes for accurately representing steel members in your 3D model. Historical and modern country-specific steel manuals can be added quickly when your company enters new markets.

Capabilities:

- Intelligent 3D steel and concrete design
- Member modeling
- Plate modeling
- Footing and foundation modeling
- Slab and wall modeling
- Connection modeling
- Stairs, ladders and hand rail arrangements
- Decking and grating modeling
- Coping and mitering
- International steel libraries
- Bills of material
- 2D output linked to 3D model
- Data interoperability for structural analysis/detailing
- Weight and center of gravity
- Assembly templates
- Flexible selection filtering
- Clash detection

Easy-to-place assemblies

Some of the more detailed work in a structure includes adding secondary steel for access control, and Forte StructureWorx provides commands for effortless modeling of these objects. Whether your project includes industry standards or your company has developed its own standard, Forte StructureWorx allows the designer to replicate the necessary arrangement of these traffic items. Many customization options are built in so that these assembly objects can reflect the scenarios encountered in industrial applications. Grating and decking can be rendered to visualize accurate portrayals of these objects in your 3D model.

Drawings

Designers and engineers can easily create 2D drawings of their 3D models with native dimensioning and annotations. Typical general arrangement drawings include single line steel and 2D representations that support multiple views.

Reuse your structural model

Why spend hours recreating your structural model in order to analyze your structure? Using an industry standard import/export format, the designer can export the structural model to a structural analysis package such as Aspect Structure (formerly GT STRUDL), saving many hours of rework. Similarly, a designer can export the model to send to a structural detailing contractor and continually update the contractor as changes occur. Any modifications by the engineer or detailer can then be re-imported into the Forte StructureWorx model for clash detection.

Bills of material

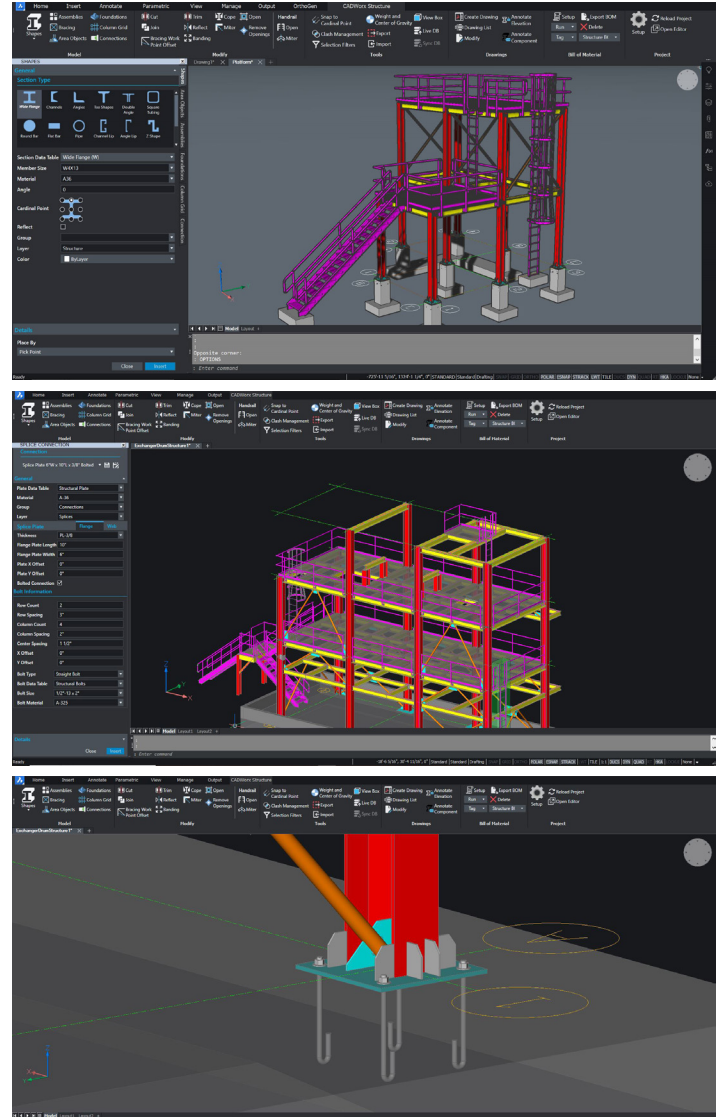

Users can create accurate, user-configurable bills of material in the most popular database formats for all of their steel materials in the 3D model. These reports can be used to show total lengths and weights for each size, cut lengths and selected object lengths and weights.

Technical specifications

- AutoCAD®-compatible
- BricsCAD®-compatible (Recommended)

Application areas

Process and plant design, piping, equipment, steelwork, petrochemical, chemical, power, offshore, food, beverage, brewing, pharmaceutical, semiconductor, water treatment, building services and shipbuilding.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property, and assets— for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency, and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
