PRODUCT SHEET

Octave Attune APM and Octave Tempo Operations Management connector

Improving asset health and modernizing asset performance management

Key Features

Connection Page: Easily establish the integration between Attune APM and Tempo Operations Management.

Tag Import: Import "tags" from Tempo Operations Management and associate them with assets in Attune APM.

Data Polling: Continuously poll "datapoints" from Tempo Operations Management for imported tags.

Historical Data: Option to import historical data from Tempo Operations Management datapoints.

You need to maintain the health and performance of critical assets, but you may often rely on manual operator rounds and maintenance inspections to assess asset conditions. Fragmented data collection, delayed insights and an elevated risk of unexpected asset failures? These issues create substantial operational and safety challenges unless you cut through the noise with a scalable solution.

Scale up what's possible with the Attune APM – Tempo Operations Management connector

The Attune APM (formerly HxGN APM) – Tempo Operations Management connector (formerly j5 connector) bridges the gap between mobile inspection data and comprehensive asset performance management. This integration empowers Attune APM users to dynamically incorporate data collected through Tempo Operator Rounds and Routine Duties (formerly j5 Operator Rounds and Routine Duties) into their Asset Twin, providing a seamless flow of information that enhances asset monitoring and risk management.

The benefits of the integration

- Capture a unified view of asset risk by integrating mobile data with Attune APM
- Adopt a more holistic approach to monitoring assets under care
- Improve the precision of asset health assessments with enriched data
- Leverage multi-source data analytics for better strategic decisions
- Proactively address potential issues to minimize unexpected asset failures and their consequences
- Increase the value of mobile data by integrating it with other data sources

By integrating real-time inspection data from Tempo Operations Management with enterprise asset management systems and process data historians, Attune APM provides a holistic view of asset health. This integration enhances predictive maintenance and risk assessments, allowing organizations to make informed decisions that improve operational efficiency, safety and reliability.

Our solutions? Your leverage. Gain greater awareness of your asset health and make smarter decisions for your organization's asset management strategy.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property and assets – for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
