

DATA SHEET

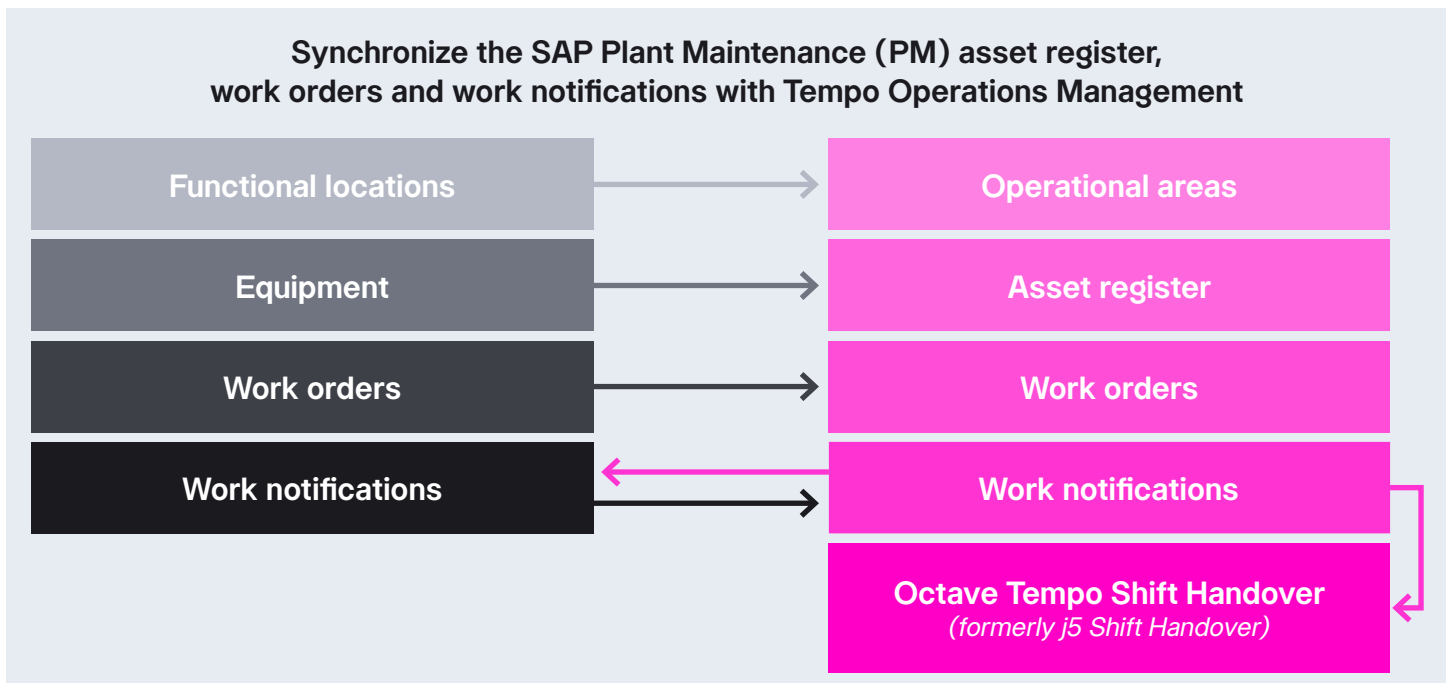

Octave Tempo Operations Management Connector for SAP Plant Maintenance

Are your operations and maintenance teams geared for success?

Every industrial site has a stream of operations, maintenance and safety events occurring at all levels and areas within the process.

By synchronizing the SAP Plant Maintenance (PM) asset register, work orders and work notifications with Octave Tempo Operations Management (formerly j5 Operations Management Solutions) software, personnel can be continuously informed. This crucial data can also be shared easily across departments, enhancing visibility.

“The implementation of Tempo Operations Management across the water control function has given greater visibility of ongoing issues and given us a consistent and accountable handover tool.”

Ant Tyler, System operations compliance manager, Thames Water

Control room

Personnel can visualize work orders when operations equipment and areas require maintenance, as well as view and create work notifications. This can be done using the familiar Tempo Operations Management interface.

Field operators

Operators can visualize work orders in the field, along with viewing and creating work notifications. This is particularly useful when they notice maintenance issues while undertaking Octave Tempo Operator Rounds and Routine Duties (formerly j5 Operator Rounds and Routine Duties) on their mobile devices.

Maintenance

Maintenance teams can make informed decisions because all the information they need to keep everything working is readily available. Work orders and work notifications from the SAP PM Computerized Maintenance Management System (CMMS) appear in the same functional locations and equipment categories in Tempo Operations Management, making it easy to use both.

Safety

Personnel have consistent information and in-sync processes from the operations and maintenance departments, which are key to maintaining compliance and ensuring the safety of workers and the general public.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property, and assets— for any scope, at any scale. For decades, we’ve partnered with customers to sharpen performance, elevate efficiency, and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what’s possible from day one onward.
