Brave renewable world

Maximize your operations

- Digitalize your critical processes, procedures and permits to optimize your operations
- Capture, structure and store critical asset, situational, qualitative and quantitative information digitally to support interconnected teams across the enterprise
- Take important shift, operator round, control of work, personnel, safety, maintenance and process information and make it available across the entire organization

Connect your operational data

- Enhance information connection and interoperability by aggregating operational data and enabling a digital backbone
- Enable advanced situation awareness with alarm management, boundary controls, control loop performance and Independent Protection Layers (IPL) management
- Defend your operational technology (OT/ICS) landscape as part of your cybersecurity strategy

Optimize asset performance

- Move from reactive to predictive maintenance to reduce the risk of unexpected downtime and decrease operational costs
- Make better capital planning decisions across the asset lifecycle to improve performance, productivity and profitability
- Leverage automation and intelligence to reduce waste by improving asset energy use and extending asset life

Transform your journey

- Build and maintain an information management data ecosystem throughout the asset lifecycle, allowing for a continuous journey of operational excellence
- Deploy a comprehensive digital twin to analyze and convert complex data into actionable insights, facilitating interaction across the value chain and enabling a connected digital thread
- Digitalization delivers value across your organization

Digitalization delivers value across your organization

Business operations leadership

Maximize ROI and OPEX efficiency by harnessing the untapped potential of your data

Maintenance / reliability leadership

Improve safety, quality and efficiency in maintenance operations to enhance reliability and asset productivity

IT leadership

Deliver scalable digital transformation solutions to align with the rapidly progressing energy transition

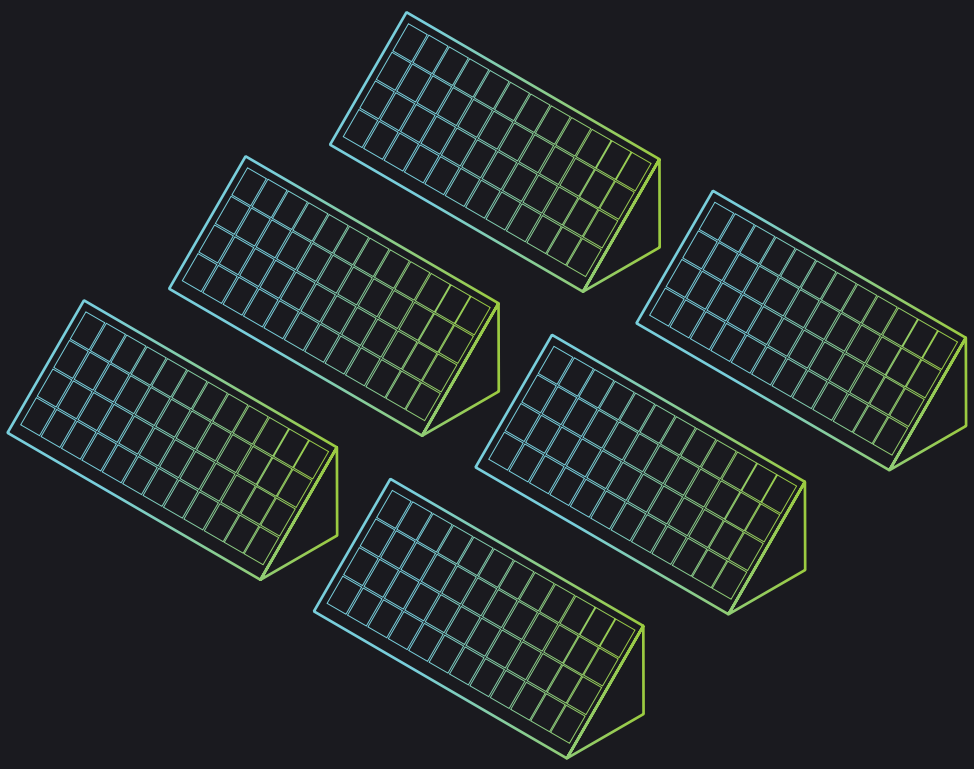

Operations

Achieve on-demand access to appropriate procedures and manuals, ensuring efficiency across various geographical locations and types of assets in the field

---

Bringing it all together

The implementation of a comprehensive digital twin, incorporating Octave InConcert Core (formerly HxGN SDx), Tempo Operations Management (formerly j5 Operations Management Solutions), Tempo Operating Procedures (formerly AcceleratorKMS), Attune EAM (formerly HxGN EAM) and Tempo Control System Effectiveness (formerly PAS PlantState Integrity), establishes an information management ecosystem sustained across the entire asset lifecycle. This enables the ongoing pursuit of operational excellence, while Cyber Integrity (formerly PAS Cyber Integrity) safeguards the foundations of your operational technology/ industrial control systems (OT/ICS).

Accelerate your journey to operational excellence with digital transformation.
