

SOLUTION SHEET

Business process management with Octave Sequence Enterprise

Project performance depends on more than cost, schedule and risk. It depends on how work moves – the approvals, reviews, corrective actions and hand-offs that carry a project from one step to the next.

In many organizations, those processes run outside the system of record, in a patchwork of spreadsheets, email threads, chat channels and single-purpose tools. Work stalls between steps, approvals get skipped, and no one can see a process's status – or prove afterward that it was followed.

Octave Sequence Enterprise (formerly EcoSys) closes that gap by building business process management into the core of project performance. Processes are no longer managed apart from the projects they serve – they are defined, governed and connected to the project data around them.

Model any process as a governed workflow

Sequence Enterprise lets organizations model their business processes in the same platform they use to run projects and portfolios. Each process is built on a state machine: every item of work sits in exactly one defined state and advances only when set conditions and validators are met, triggered by a person or by the system. Nothing moves by accident, and nothing is lost between steps.

Because the data model is fully configurable, each process carries exactly the attributes it needs and follows its own workflow – so a single deployment can support dozens of distinct processes, from change and issue management to structured quality and corrective-action workflows.

Govern progression and assign the work

Workflows are gated from initiation to completion, so required steps cannot be skipped, and built-in escalation raises an item for higher attention, including executive review. Work is carried out at the task level: each process holds one or more tasks assigned to named owners. Every user sees a role-based dashboard of the work they own, while managers see the status of every process as it progresses.

Connect processes to the data that drives outcomes

Each process links directly to the scope, changes, contracts, costs and risks it relates to, so the work behind a project stays connected to the project itself. Teams no longer move between systems to understand a single situation – a change approved in a workflow updates the project it belongs to, and a risk escalated through a process appears against the portfolio it threatens. Decisions are based on connected, complete data.

Enterprise control, with no new system to manage

Because business process management runs inside Sequence Enterprise, it inherits the platform's governance and role-based access – there is no separate workflow system to buy, integrate or secure, and no second security layer to maintain. With the platform's [mobile capabilities](#), teams can also act on and update work from the field, keeping site activity and process status aligned in real time.

Business impact

- **Consistent execution** – Every process runs the same governed way each time
- **Fewer gaps and delays** – Required steps are enforced, so nothing stalls between systems
- **Audit readiness** – A full record of every transition and approval supports compliance and audit
- **Lower complexity** – No separate workflow system to run
- **Clearer accountability** – Role-based dashboards show each person the work they own

What is Sequence Enterprise?

Sequence Enterprise is Octave's [enterprise project performance](#) (EPP) platform, unifying project portfolio management, project controls and project management in one connected system. It brings together cost, schedule, risk, contracts, resources – and now the business processes that drive delivery – so organizations can run projects and the work behind them with greater confidence, control and predictability.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property, and assets– for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency, and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
