SOLUTION SHEET

Octave Tempo Operations Management Framework

The challenge

Defining distinct operational areas is often required in industrial plant environments. Each area may have a separate workforce and equipment or handle different parts of plant processes. While some areas are organized by physical location, others are defined by the specific role they play within plant operations. Organizations need the ability to clearly structure both broad operational functions and the precise equipment associated with specific locations.

Tempo Operations Management Framework (formerly j5 Framework) users have reported benefits including:

- Easy to use
- Eliminates paper, spreadsheets and scattered databases
- Saves time and improves efficiency
- Components for users, groups and profiles
- Fast search and filtering
- Access to dashboards, reports and views
- Integration with other Tempo Operations Management applications

"I would definitely recommend Tempo Operations Management to my next client."

Saqib Khan
Senior Manager,
Accenture Singapore

Tempo Operations Management Framework provided the solution

To remedy these challenges, companies around the world use Tempo Operations Management Framework (formerly j5 Framework). This enables companies to bring multiple operational processes under one umbrella with searchability, connectivity and spreadsheet-like configurability.

Tempo Framework allows users to easily manage operational areas and assets to refine workflows, increase process safety and improve overall shift excellence.
