Octave Tempo Operations Management

Custom configurable.
Easy to upgrade. Built to scale.

The challenge

Industrial organizations have long normalized inefficiency. But that doesn't mean it's inevitable.

From paper spreadsheets and word processor files to scattered databases and inadequate tools, disconnected shift handover documentation isn't just inefficient—it's dangerous.

To solve this problem and protect workers from unnecessary risk, some companies have gone digital, embracing operations management platforms that enhance communication, consistency and control. However, choosing the wrong platform can unleash a whole new set of problems, including:

Disconnected applications

Applications don't speak to each other, leading to knowledge gaps between teams.

Singular solutions

Vendors offer singular applications that paper over cracks while leaving the whole exposed.

“The introduction of Tempo Operations Management at INPEX helped improve and enhance operation management efficiency. The platform has contributed to the efficient and stable operation of INPEX assets. Information is standardized, accurate and easier to retrieve.”

Jinsei Li

General Manager Information Management & Technology Unit INPEX

Enterprise inconsistencies

Operations and Health, Safety and Environment (HSE) personnel use different applications, missing out on crucial overlapping data.

Zero mobility

A lack of mobile applications means field personnel miss out on access to key information when and where it's needed most.

Detached applications

Important real-time and process data from data historians, the Computerized Maintenance Management System (CMMS), the Distributed Control System (DCS), the Programmable Logic Controller (PLC), EAM software and Supervisory Control and Data Acquisition System (SCADA) systems is lost.

Failure to scale

Digital solutions that don't account for future scaling pave the way for unnecessary headaches and complications down the road.

Costly configuration

Software that's difficult to configure wastes time, adds financial cost and leads to unnecessary change requests.

Vendor reliance

When application extensions require advanced coding skills and vendor engagement to implement, inefficiencies stack up.

"It has become an essential tool. Managers now have the ability to issue night orders, standing orders and new procedures and then have the ability to see that their direct report is received and acknowledged."

Plant Manager Calpine

The solution

Octave Tempo Operations Management (formerly j5 Operations Management Solutions)

Tempo Operations Management is a singular, evolving framework of operations management and process safety applications that connects people, processes and data points from across organizations.

Developed based on deep industry insights and experience, Tempo Operations Management is proven to bridge communication gaps, elevate efficiency and optimize operations at even the most complex of companies.

First released in 2015, Tempo Operations Management introduced a packaged, upgradable system where site configuration was segregated to allow for seamless upgrades. Since then, it's continued to evolve and adapt to equip today's industrial leaders with the most powerful platform possible.

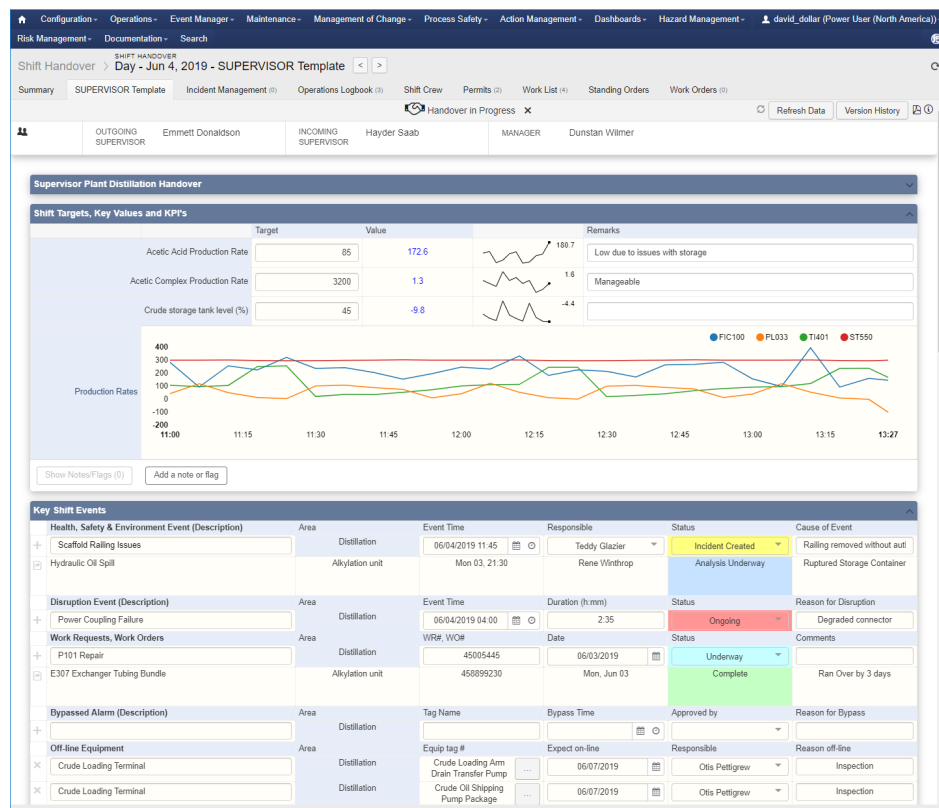

In 2016, the disruptive Tempo Operations Management IndustraForm Templates were introduced into the marketplace. This unique technology allows customers to transform paper docs, forms and spreadsheets into integrated enterprise-level applications.

It also allows customers to configure Tempo Operations Management solutions in a familiar, spreadsheet-like environment. This makes configuration easy and accessible to those who don't have programming skills, while slashing added time, costs and vendor reliance.

This configuration extends to mobile devices, where Tempo Operations Management IndustriaForm Templates can also be used extensively, adding to the relative effort-free upgrading process.

From deep industry experience, Octave understands the challenge of upgrading to new versions when each plant has a different installation or configuration that has been created with custom services by the software vendor.

Because Tempo Operations Management applications and IndustriaForm Templates all exist on the same desktop and mobile framework, upgrading multiple applications and templates is stable and hassle-free—saving time and costs, while empowering customers to allocate more resources to plant operations.

Upgrade benefits

- Robust version control
- Shutdown-free upgrades
- Hassle-free roll-back and roll-forward capabilities
- New versions of Tempo Operations Management applications and IndustriaForm Templates can be tested thoroughly before going live

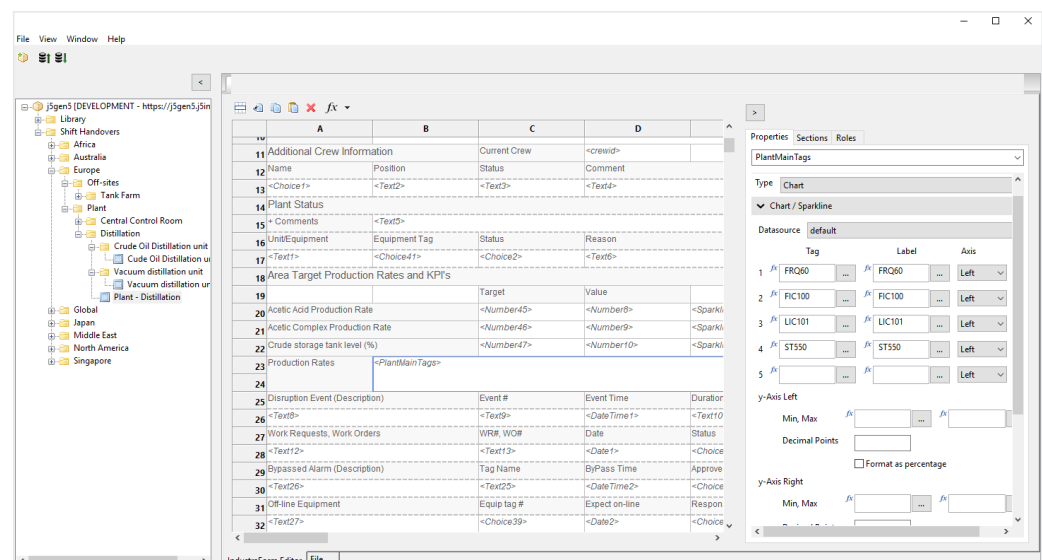

“Tempo Operations Management has given greater visibility of ongoing issues and given us a consistent and accountable handover tool.”

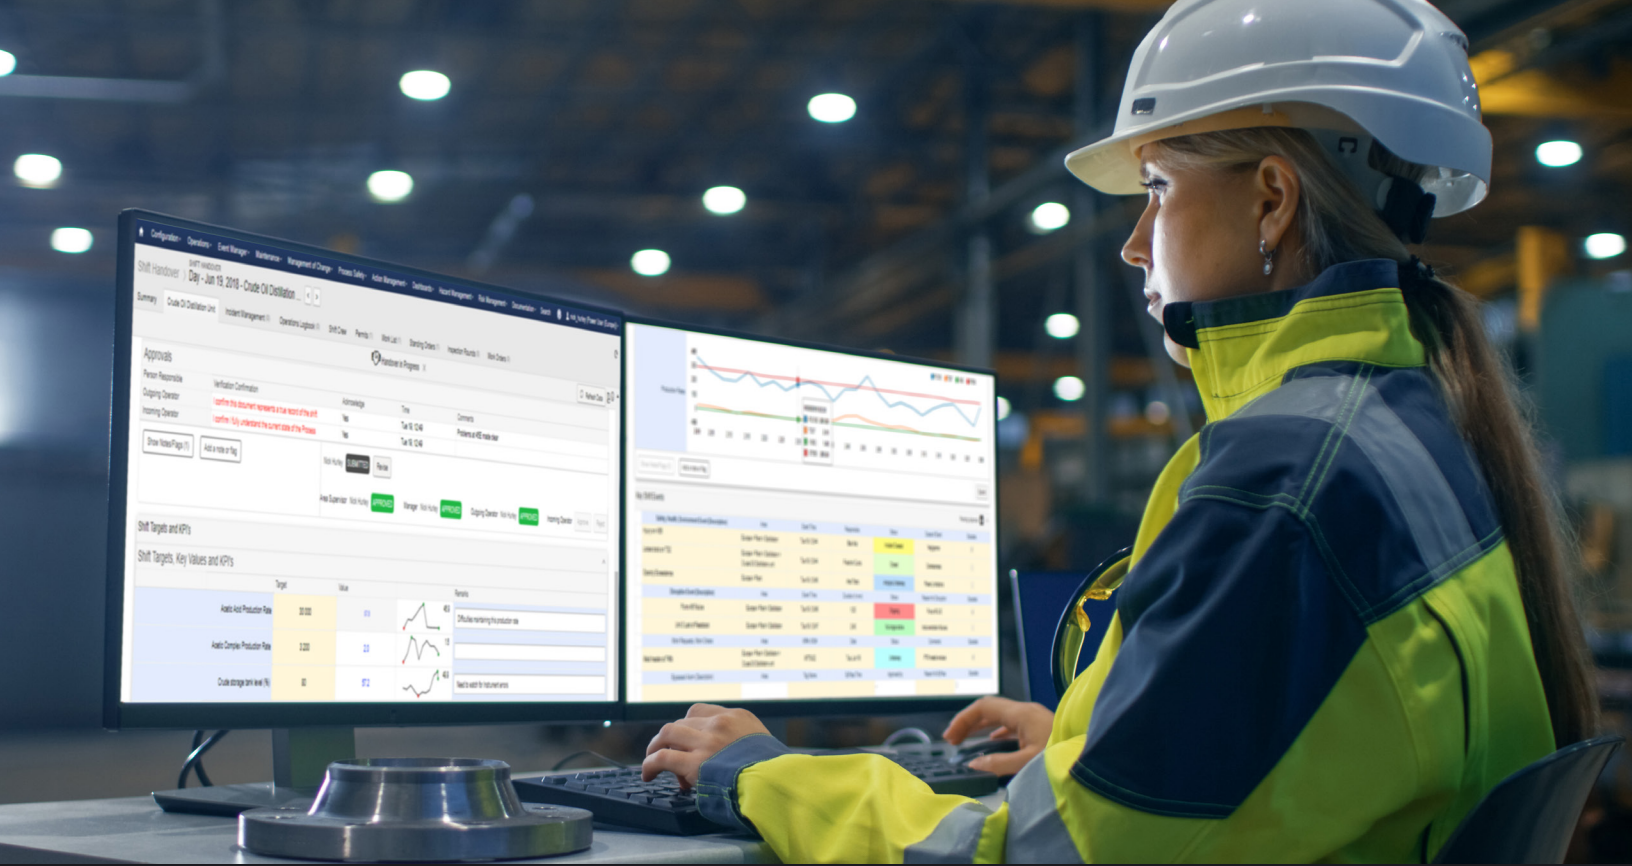

Ant Tyler

Systems Operations Compliance Manager,
Thames Water

Configuration benefits

- Add new fields easily across multiple types
- Intuitive workflows offer configurable gates, states and notifications
- Change application layouts effortlessly across desktop and mobile
- Control access with flexible user roles and permissions
- Connect seamlessly to real-time data sources, historians and CMMS platforms
- Visualize performance with trends, charts and dashboards
- Train teams quickly with comprehensive online tools and sandbox capabilities in a familiar, spreadsheet-like environment
- Leverage dynamic conditions and actions in real time
- Integrate applications and templates without friction

Octave's operations management platform allows customers to easily upgrade to the latest release—equipping customers with the full advantage of the latest functional enhancements, with faster returns on investment. Enjoy upgrades annually—no costly, years-long wait required.

Are you ready to optimize operations?
Octave is here to help.

Contact us today to discover how Tempo Operations Management can digitize your human procedures and power operational excellence.

About Octave

Octave is a leader in enterprise software, turning data into decisive action and intelligence into your edge. Our software solves for and simplifies complexity, from the design and build to operations and protection of people, property and assets – for any scope, at any scale. For decades, we've partnered with customers to sharpen performance, elevate efficiency and amplify results. From factory floors to entire cities, our solutions are tuned to scale up what's possible from day one onward.
